WASIM ANSARI

CAREER OBJECTIVE

To work in challenging environment which require all my skills and which forces me to move out of the comfort zone and discover new opportunities, which helps in development of my career along with my organization's goal.

WORK EXPERIENCE

○ Student Intern at NOVAITECH Aug, 21 – Jan, 22

Worked on

- Python
- Django REST Framework

PROJECT WORKS

○ Brain Tumour Detection using CNN Oct, 21 – Present.

- This project makes use of transfer learning process to increase the accuracy of model in minimum training effort.
- Datasets are taken from Kaggle.com to train the model.
- Our aim is to achieve very high efficiency and accuracy through this project so that treatment of brain tumour becomes easy and affordable, and its early detection will also save many lives.

○ Basic calculator application in Android Studio Sept, 20

The application consists of basic calculator functions such as addition, subtraction, division, multiplication and square root.

- Java is used as primary programming language.
- Java library called Math Parser is used to parse the input string.

CERTIFICATION

- HTML, CSS from Udemy
- Python for Data Science from Udemy
- Getting Started with Python from Coursera
